Erosion & Weed Control

JutePro: Thick-Mat

JutePro Thick is the robust weed and erosion control geotextile blanket made from natural Jute fibres. Jute (Corchorus spp.) is a plant found on the sub-continent and where it is sustainably farmed.

The superior grade of jute fibre is cleaner and improves the tensile strength of the matting, improving its performance on steep embankments and in storm events. Being denser, it provides good weed suppression, erosion control and moisture retention for better plant establishment and survival.

JutePro Thick is a roll out mulch barrier, providing weed suppression and moisture retention to enhance plant establishment, while protecting the topsoil from erosion.

JutePro Thick is made from selected, long clean Jute fibres to add strength and longevity.

JutePro is 100% organic and biodegrades over time.

Application

Natural mulch mat for weed and erosion control, ideal for:

- Slopes up to 1:1 grade
- Roadsides and open spaces
- Revegetation areas and garden beds
- Wetlands, Ephemeral zones, and riparian batters
- Coastal and high wind sites
- Water velocities up to 1.8 metres per second

Erosion Control

Soil Saver: Jute Mesh

Soil Saver is a loose jute cargo net style mesh. Its open structure allows grass and vegetation growth through, while providing erosion control and a microclimate for seed germination.

This open net can be draped over existing vegetation eg on sand dunes where it will capture sand and native seeds. Ideal for use on earthwork sites, slopes, coastal environments, swale drains and riverbank environments.

SOILS500ROLL
Soil Saver 1.22m x 68.5m Roll (83.5m2) 500gsm 28 Rolls per pallet

The CoirPro Range

Coir (coconut fibre) is ideal for making products like erosion control and vegetation establishment geotextiles and silt berms. Coir has a high lignin content that gives it a ‘woody’ characteristic which enables it to cope with high-energy water flows & have a long degradation period of 3-5 years.

CoirPro Mesh

CoirPro mesh is a durable long-lasting ground cover matting. Its open structure allows grass and vegetation to grow through, while providing erosion control and a microclimate for seed germination. Ideal for use in wetlands, slope revegetation up to 1:1 grade, swale drains, sand dunes and riverbank environments.

- Coir naturally breaks down for environmentally sensitive areas
- The robust coir fibre is ideal for the use in riparian environments, river banks, streams
- Coir logs are an alternative to rip rap and other coastal shoreline structures
- Steep slopes and gullies
- Open swale drains along roads where water and sediment can be captured
- Soil stockpiles, building sites, gutters and footpaths

COIRPROP2	2m x 1m pillow

Erosion & Sediment Control

SiltWorm™: Sediment Control

SiltWorm™ is a water-permeable barrier that filters silt and gross pollutants from being washed into grates, drains and watercourses. Use for:

- To contain sediment and ash on bush fire sites near water ways
- Ideal for building and road construction sites
- Silt and rubbish filter in curbs and channels, side-entry and grate pits
- Ideal for use around stockpiles of soil and bark
- Can be left in the environment to biodegrade
