Ekidna Treeguards

About Ekidna treeguards

The key to their effectiveness is the spikes that are cut and pressed into 100% Australian welded wire mesh. They have now proven themselves in a large number of landscapes across Australia and New Zealand since 2021.

Up to 200 guards can be freighted on a single pallet making it a freight effective option for larger projects. If you have any questions about guards please contact us and we will be happy to answer them for you.

Key benefits

- Flat packed to enable efficient freight and transport to project sites with up to 200 on a single pallet
- Fast to install – about 10 minutes per plant
- Long lasting and reusable
- Guard sheets can be joined to create different configurations of guard size
- 100% Australian made and owned
- Cheaper than other effective paddock tree protection options

The guard comes in two different sizes and can be made into the following example configurations.
